

FORMATION OF COMPETENCY SKILLS AND SKILLS IN THE SYSTEM OF TRAINING OF HIGHLY QUALIFIED TEACHERS

Nodir Norali ugli Abdurakhmonov

Deputy Director of the Center for Pedagogical Services

A. Avloni Research Institute

INTRODUCTION

You can, of course, improve some of these skills for yourself. You can join professional groups, sign up to CPD blogs, work with senior staff and peers in your school to reflect on your teaching and get better. And it's important to do that to keep on improving in your career.

But taking a short general English teacher course in as little as a week or two can do so much more for you. Teacher training in Ireland can give you a good start in learning new skills, improving existing ones and learning how to work with your peers.

METHODOLOGY

The term "professional competence" had been actively used since 90s of the last century and the concept became the subject of a special, comprehensive study of many researchers dealing with educational activities (T.I. Rudnev, G.Stein, Fullan M.G., Freeman D. and G. Crookes etc). In the given article the author is attempting to emphasize some points of research, revealing actual problems of teaching process and methodology and what solutions can be implemented to the mentioned problems.

RESULTS AND DISCUSSION

Ten skills that every good English teacher needs - and how to get them.

1. Excellent English pronunciation, vocabulary and grammar skills

It sounds obvious, but once you start work teaching in English you need to keep on improving your own language skills. Your students need to be able to understand what you say and trust your grammar. Sometimes teachers don't get helpful feedback from their managers about this to support them to improve.

2. Confidence and skills to give motivating and interesting lessons to your students

Teachers are a bit like actors. You have to put on a show to get your students focusing on your lesson and keep their interest. Some people can feel very uncomfortable doing this. So our courses will give you the skills to keep your students learning, and the confidence to use them.

3. Develop your own teaching materials

You may be teaching English from course textbooks right now, but you'll want to find ways of developing material to use in class which will engage and challenge your students at some point. Teachers who create great materials are popular with their students and get great feedback.

4. Assessment

Good English teachers are great at assessing the progress, strengths and weaknesses of their students. Only by assessing students properly can teachers help them to fill gaps in their knowledge and help them to learn best.

5. Reflecting on your own practice and micro teaching

Good English teachers keep on getting better throughout their careers. You can do this by reflecting on your own lessons and practice, and also by micro teaching, which we do to help everyone on a teacher training course here at the Galway Cultural Institute. We record you teaching, and you'll review it with peers and our teachers to find out what you did well and what could have gone better.

6. Mastery of your subject

If you're teaching specialist subjects in English, you need the vocabulary to be able to enthuse students and help them learn, whether in science, maths, history or geography. We can help you learn some practical tasks and activities to use in the classroom, and vocabulary that you can use in any lesson, and also how to source and adapt material to use in CLIL sessions

7. Use technology in the classroom

Interactive screens, websites and apps are part of a teacher's job. It's vital to be able to use them properly and help students to do so. It's also important to be able to support colleagues in the staffroom to use technology well. Our English and Technology course is for all teachers who want to improve their skills using technology.

8. Keep up to date with the latest methods and theories for English teachers. Pedagogy - the art of teaching - changes all the time, as research tells us how students learn best. If you want to be a good English teacher, it's important to

keep on learning about the latest theories on teaching and use these to update your practice. It's a good idea to subscribe to research blogs and websites, and if you join any of our [English teacher training courses](#) you'll learn more about the latest thinking.

9. Gain new practical skills

Set yourself apart from other English teachers by having a useful specialism that could be in demand where you'd like to work. For instance, our [Teacher Training - Drama Music & Culture Programme](#) will equip you to introduce these skills in a primary school English language classroom. Your pupils can be learning English whilst acting or improving their music.

10. Get equipped to teach at the right level

Lecturing and running seminars and tutorials at university is very different to teaching young children, and requires a whole different set of skills. You might have to give lectures and presentations, create academic documents and understand how to write articles for publication, and our [Erasmus+ General English + Academic Writing & Presentation Skills](#) programme is designed to help non-native English speakers teaching in English to do all of this. You'll also get knowledge and skills you can share with students and colleagues, and use to move on in your career.

CONCLUSION

One of the key points is the choice of methods and techniques of training. There has been developed a system of methods in the framework of the theory of developmental education, based on the principle of goal-setting (reflecting a system of goals and student learning), the principle of the binary (reflecting the nature of the interaction of teacher and student) and the principle of problematic (reflecting the presence of contradictions in the learning process and the subject).
