### ANNOTATSIYA

Maqolada yangi modellarni texnik eskiz davrida texnologik murakkablik darajasini aniqlash va buyum tannarxini kompleks baholash ketma-ketligi algoritmi berilgan. Bu algoritm yordamida buyumni loyixalash bosqichida iqtisodiy samaradorligini taxlil qilish mumkin.

**Kalit so'zlar:** eskiz, texnologik murakkablik darajasi, algoritm, konstruktiv – texnologik ko'rsatkichlar, murakkablashtiruvchi elementlar, korxon.

### ABSTRACT

The article shows a solution of the technological difficulty level of technological sketches during the technical sketch of the technical sketch of the technical sketch of the technical sketch and an algorithm of comprehensive assessment of the cost of the appliances. With the help of this algorithm, it is possible to analyze the economic efficiency of the appliance during the project.

**Keywords:** sketch, level of technological complexity, algorithm, constructive-technological indicators, complicating elements, enterprise.
